Correct answers · one point per question

Your starting point

Use this report to choose where to begin practicing.

Your skills by domain

Domain	Correct	Next step
Technology Basics	4 / 4 	Keep applying
Digital Citizenship	4 / 4 	Keep applying
Information Management	2 / 4 	Practice this topic
Content Creation	0 / 4 	Practice this topic
Communication	0 / 4 	Practice this topic
Collaboration	0 / 4 	Practice this topic
Safety and Security	0 / 4 	Practice this topic

Your next practice steps

Start with these topics, then use the answer explanations below.

1. **Content Creation** — practice with week 3.
2. **Communication** — practice with week 4.

This classroom score guides practice; it is not an IC3 certification score.

Answers and explanations

Correct

1. At your local library, the text on a computer-help webpage is too small. Text in your other apps is comfortable to read. Which change best fits this problem?

Your answer: Increase the browser zoom for the webpage.

Browser zoom changes the size of webpage content. Display scaling affects the wider desktop, and brightness changes light output. Start with the control that matches the problem, then check the result.

[Review week 1](#) · Technology Basics

Correct

2. A library volunteer is arranging a practice session with you. They need to see when you are busy, but you want to keep appointment names and locations private. Which calendar setting best fits?

Your answer: Share free/busy availability only.

Free/busy sharing answers the scheduling question without exposing appointment details. Check the actual sharing settings and what the other person can see; sharing a whole calendar may reveal more than the task needs.

[Review week 1](#) · Technology Basics

Correct

3. While you draft a message about a library visit, autocorrect replaces your neighbor's last name with a different word. The changed word is spelled correctly. What should you do before sending?

Your answer: Restore the intended name and reread the message.

Autocorrect and autocomplete offer suggestions, not guarantees. Check names, full addresses and meaning yourself. A correctly spelled word or familiar contact can still be wrong for this message.

[Review week 1](#) · Technology Basics

Correct

4. You need 20 copies of a one-page computer-help handout. The lab has two printers, and the print dialog shows the one used yesterday. What should you do before printing the full set?

Your answer: Confirm the printer, inspect the preview and print one test copy.

The selected printer may be left over from another task, and a layout change can alter the output. Confirm the destination and preview, then inspect one test copy before sending the remaining copies.

Review week 1 · Technology Basics

Correct

5. You use a personal account and a separate volunteer account. Before posting a library event notice, you notice your personal account is active. The notice should come from the volunteer account. What should you do?

Your answer: Switch accounts and check the posting identity and audience.

The active account determines the identity attached to a post. A signature or profile picture does not switch accounts. Confirm both your role and the intended audience before posting.

Review week 4 · Digital Citizenship

Correct

6. It is late at night, and you finish a nonurgent request for a library volunteer. You need a reply by Friday, and the group normally handles messages during daytime hours. Which approach is most considerate?

Your answer: Send during expected hours and state that a reply is needed by Friday.

Match message timing to urgency and the group's expectations. A specific deadline tells the recipient when to act. For a nonurgent task, an urgent label or repeated reminders creates needless pressure.

Review week 4 · Digital Citizenship

Correct

7. During a library practice session, a partner asks what an abbreviation in your instructions means. You do not know their past computer experience. Which response best helps them continue?

Your answer: Explain the term in plain language and ask whether an example would help.

Explain the unfamiliar term and connect it to the task. One question does not tell you someone's overall ability. Plain language and an offer of help support learning without making assumptions.

Review week 4 · Digital Citizenship

Correct

8. You want to change an app's download folder, but its menus changed after an update. An older printed guide shows a button you cannot find. What is the most useful next step?

Your answer: Use official help for the current version and search for changing the download folder.

Current official help is a good starting point when menus change. Identify the app version and the task, rather than relying only on old button positions. When asking for help, describe what you tried and what happened.

Review week 1 · Digital Citizenship

Correct

9. You want an in-person computer-help session at a public library near Beckley, West Virginia. Which search gives the search engine the clearest description of your need?

Your answer: Beckley WV public library computer help sessions

Useful search terms name the service, place and setting you need. These searches are starting points, not proof that a class exists. Confirm current details with the library before making plans.

Review week 2 · Information Management

Correct

10. A shared post says every library in your county offers free laptop loans. It gives no source or date. You want to borrow a laptop from your local library. What is the best way to check the claim?

Your answer: Contact that library through its official website or known phone number.

Verify a service with the organization responsible for providing it. Search position, appearance and repeated claims do not establish current availability. Check the details that matter for your visit.

Review week 2 · Information Management

Review this topic

11. You need computer help you can attend locally in West Virginia. You find a current, accurate library page, but the class is in another state and is in person only. Why does this page not meet your need?

Your answer: Any page about a library must apply to your local library too.

Correct answer: The information can be accurate but not relevant to your location.

Accuracy and relevance are different checks. A trustworthy page can describe a real class that does not fit your location or attendance needs. Use the source that answers your actual question.

Review week 2 · Information Management

Review this topic

12. In the fictional library practice form, you need to request computer help. The form has required fields and several optional fields. What should you check before entering information?

Your answer: How to fill every optional field, even when it adds unrelated details.

Correct answer: Who receives it, why it is needed and which fields the request requires.

Check who collects the information, the purpose and the required fields. Optional does not mean necessary. In class, use fictional details; review the completed request and read its confirmation.

Review week 2 · Information Management

[Review this topic](#)

13. You are making a library handout with sections called Getting started, Practice steps and Where to get help. Readers should be able to navigate its sections, including with a screen reader. How should you mark the section titles?

Your answer: Make the titles bold but leave them as ordinary paragraphs.

Correct answer: Apply the document's appropriate heading styles.

Heading styles give section titles structural meaning, which helps navigation and assistive technology. Bold, font size and spacing can change appearance without creating that structure.

[Review week 3](#) · Content Creation

[Review this topic](#)

14. Your practice budget lists paper at \$12 in B2, folders at \$8 in B3 and pens at \$5 in B4. You want a total that updates if any cost changes. Which formula belongs in the total cell?

Your answer: =B2+B4

Correct answer: =SUM(B2:B4)

The colon includes every cell in the range, including the middle row. Adding only the first and last cells misses an item. A fixed number can look correct now but will not update when an input changes. Test the formula by changing one input.

[Review week 3](#) · Content Creation

Review this topic

15. You find a photograph through an image search and want to add it to a community handout. The search preview does not show reuse terms. What should you do before using it?

Your answer: Use it with the creator's name because credit alone always grants permission.

Correct answer: Open the source, check allowed uses and follow any required credit conditions.

Find the actual license or permission and follow its conditions, including whether changes are allowed and what credit is needed. Credit, a screenshot or free distribution does not by itself establish permission. Use an approved alternative if permission is unclear.

Review week 3 · Content Creation

Review this topic

16. A partner needs to rewrite two paragraphs in your workshop handout. You want them to edit the wording directly. Which file and access best support that task?

Your answer: A picture of the page that lets the partner see the wording.

Correct answer: An editable document with permission for the partner to edit.

Direct revision needs both an editable format and permission to edit. A screenshot shows the content but does not provide editable paragraphs. A view-only link also prevents the intended task; a checked PDF can be useful later for finished distribution.

Review week 3 · Content Creation

Review this topic

17. You are emailing the library to ask which room will host its computer-help session. Which subject line best tells the recipient what you need?

Your answer: A question about something at the library

Correct answer: Please confirm the room for the computer-help session

A useful subject names the topic and the action needed. A vague subject hides the request, while saying something is confirmed incorrectly suggests the question is already settled. Put the needed context in the message as well.

Review week 4 · Communication

[Review this topic](#)

18. You are sending a workshop announcement to people who do not need to see one another's email addresses. Which choice hides that recipient list from the other recipients?

Your answer: Place those addresses in Cc.

Correct answer: Place those addresses in Bcc.

Bcc hides those recipient addresses from other recipients; To and Cc normally show them. Bcc does not encrypt the message, stop forwarding or make an attachment safe.

[Review week 4](#) · Communication

[Review this topic](#)

19. A fictional design app offers a seven-day free trial for making a community flyer. You only need it for one project. What should you check before starting the trial?

Your answer: Only whether the first seven days are free.

Correct answer: Whether it renews, what it will cost and how and when to cancel.

Look beyond the introductory price to renewal and cancellation terms. Removing an app is not the same as following the service's cancellation process. The class uses fictional offers and does not require a real purchase.

[Review week 4](#) · Communication

[Review this topic](#)

20. You downloaded a fictional photo app for free. A new button offers extra templates for a one-time \$4 charge. What should you do before choosing that upgrade?

Your answer: Assume the templates are free because the app cost nothing to download.

Correct answer: Review the separate purchase and its terms before deciding whether to authorize it.

The download price and the price of an extra feature are separate. Read the purchase details before authorizing anything; do not assume when or whether a charge applies. No real payment is needed for the practice.

[Review week 4](#) · Communication

[Review this topic](#)

21. Two library volunteers open the same shared handout during a live call. Both edit it while discussing their changes. Which description fits the way they are working?

Your answer: Asynchronous collaboration: leaving work for someone to review later.

Correct answer: Synchronous collaboration: working together at the same time.

Synchronous means working together at the same time. Asynchronous work happens at different times, such as leaving comments for tomorrow. Online storage and separate computers do not determine which timing pattern the team uses.

[Review week 4](#) · Collaboration

[Review this topic](#)

22. Your library handout needs a partner's feedback. They should leave comments, but you will make the wording changes. The sharing tool offers Viewer, Commenter and Editor. Which access best fits?

Your answer: Viewer for the named partner.

Correct answer: Commenter for the named partner.

Commenter access supports feedback without direct rewriting. Viewer access does not provide the requested commenting ability in this scenario, and a public editing link gives more access than the task requires.

[Review week 4](#) · Collaboration

[Review this topic](#)

23. A partner's computer-help handout says "contact us" but gives no phone number or other contact method. Which comment best explains a useful revision?

Your answer: Make the handout better before we share it.

Correct answer: Add a contact method after the steps so readers know how to get help.

Useful feedback identifies the specific problem, suggests a change and explains how readers benefit. Vague criticism leaves the author guessing. A cosmetic change does not supply missing information.

[Review week 4](#) · Collaboration

Review this topic

24. You want to record an online volunteer meeting so an absent partner can review it. Participants will be visible and speaking. What should happen before you start recording?

Your answer: Assume joining the meeting means everyone agreed to be recorded.

Correct answer: Check the organizer's rules and obtain the appropriate recording permission.

The presence of a Record button or an invitation does not establish recording permission. Check the organizer's rules and the appropriate permissions before recording participants. A helpful purpose does not replace that check.

Review week 4 · Collaboration

Review this topic

25. One learner uses a keyboard instead of a mouse. Another needs captions to follow spoken directions. Which version of a library learning page supports both needs?

Your answer: A page with captions but controls that require a mouse.

Correct answer: A page with keyboard-operated controls and captioned videos.

Flexible input and captions address different needs. Providing both lets more people complete the same task in different situations. Supporting one need does not remove the other barrier.

Review week 5 · Safety and Security

Review this topic

26. In a fictional online group, a new contact quickly becomes friendly, claims to be a local volunteer and asks for private information. You have not verified their identity. What is the best response?

Your answer: Trust the request because the profile includes local photos.

Correct answer: Pause the request and verify their identity through a separate trusted route.

A false identity used to build trust is called catfishing. This scenario does not prove the person is an impostor, but friendliness and local photos do not verify identity. Pause and check through a separate trusted route before sharing private information.

Review week 5 · Safety and Security

[Review this topic](#)

27. You find an unknown USB drive beside a computer in the library lab. You would like to return it to its owner. What is the safest next step?

Your answer: Plug it into a lab computer to look for the owner's name.

Correct answer: Give it to the instructor or authorized staff without connecting it.

An unknown drive can carry harmful software. Its label and appearance do not prove it is safe, and switching computers does not remove the risk. Let authorized staff handle it without connecting it yourself.

[Review week 5](#) · Safety and Security

[Review this topic](#)

28. A practice file can still be read even after you mark it read-only. You want to protect its readable contents if someone gets a copy without the needed key. Which feature addresses that goal?

Your answer: Read-only settings that restrict editing.

Correct answer: Encryption of the file's contents.

Encryption protects readable data by requiring the appropriate key or authorized access. Read-only settings restrict changes, renaming changes a label, and an ordinary ZIP is not automatically encrypted. An unlocked account or device still needs protection.
